

In Early Childhood we are ready to **LEAP** into learning!

Learn and grow

We believe that children learn best through an engaging and purposeful play-based program. Following the interests of their students, our educators integrate playful and explorative learning with intentionality to deliver the curriculum and build on students' learning.

Environment

We believe that authentic relationships are at the heart of our caring school community. Our educators understand that children learn best in an inclusive, safe environment that is reflective of the wider community and responds to the context of their needs. Our classrooms and playgrounds are dynamic and intentionally designed to provoke curiosity and scaffold learning.

Agency

Our educators bring together knowledge of the curriculum with the knowledge of each child's strengths, ideas, culture, abilities and interests to promote children's ownership of their learning. We believe that agency enhances children's sense of belonging, engagement with the curriculum and meaningful connections to their learning.

Problem-solving

Our educators support students to build foundational skills for lifelong learning, such as collaboration, resilience and persistence. We challenge students to explore, discover, pose questions, and solve problems in creative ways. At South Bunbury Primary School, we believe that an early childhood program should be joyful in igniting a sense of wonder and a love of learning in every child.
